ABOUT THIS GUIDE

This guide provides simple step by step instructions of what is required when submitting an Development application. This guide should be used in conjunction with the application checklist to ensure all the correct documents are with your application.

BEFORE YOU LODGE

If you are thinking about building or developing, it is important to recognise that not all building work requires the consent of Council. In some cases, common minor works such as the installation of carports, air conditioners, swimming pools and fences do not require Council approval if they satisfy certain pre-determined standards or criteria.

- Exempt development is development that has minimal environmental impact on neighbouring amenity where, subject to satisfying pre-determined standards, there is no need for any planning or construction approval. Please refer to the State Environmental Planning Policy (Exempt and Complying Development Codes) 2008 for further information on what categorises under exempt development.
- Complying development is development that complies with pre-determined development standards for a particular type of development contained in a state-wide planning document. Planning and construction approval can be obtained with the lodgement of a complying development certificate application with Council or an accredited certifier.
- Local development – is development that falls outside the pre-determined standards of exempt or complying development. The following pages apply to lodging a development application.

Types of applications

What is a Pre-DA?

A pre-lodgement development application (or Pre-DA) is an optional process that allows applicants to seek preliminary advice from Council before lodging a formal Development Application (DA). The main purpose of a Pre-DA is to:

- Identify potential issues early in the process
- Provide preliminary guidance from Council officers
- Offer the opportunity to seek independent design review from Council's Design Review Panel (DRP)
- Help streamline the assessment of the formal DA once lodged

Applicants can request pre-lodgement advice for wide range of development types. Please refer to this link for further guidance, including proposals subject to the Design excellence provisions (clause 6.15) of the Canterbury Bankstown Local Environmental Plan 2023 (CBLEP 2023).

Unsure on your development and need some guidance? Contact the Duty Planner at **9707 9000** → Check the lodgement guide for document completeness before submitting → Submit a Pre-DA application form with Council → Speak with a planner during the Pre-DA meeting

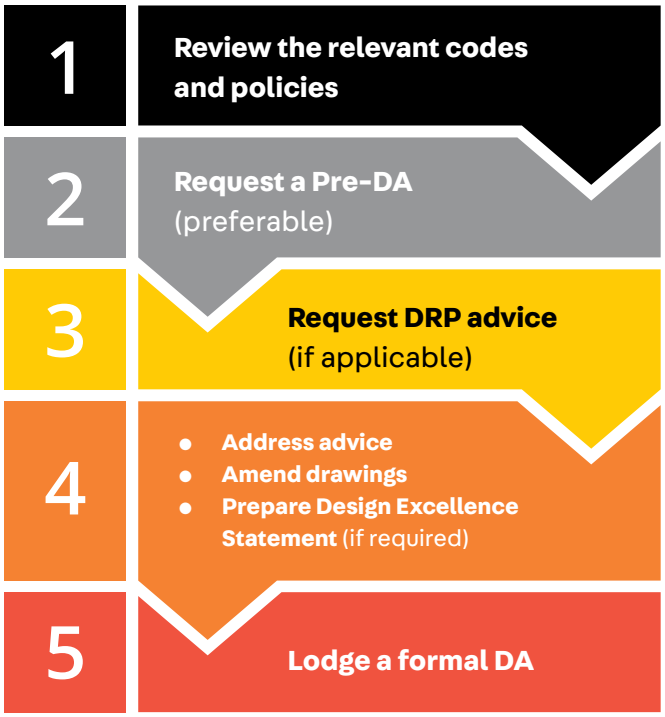

What is DRP advice?

Design Review Panel (DRP) advice is a process where applicants seek independent design review and guidance from Council's DRP. The DRP is made up of experienced, independent professionals who provide expert advice on a range of developments, including those subject to the Design excellence provisions (clause 6.15) of the CBLEP 2023.

Why request a Pre-DA or DRP advice?

Requesting a Pre-DA or DRP advice can:

- Save time and costs by addressing issues before the formal DA stage
- Improve the quality and clarity of your proposal
- Provide confidence that your application is moving in the right direction
- Support the preparation of a Design Excellence Statement (if required)
- Reduce the likelihood of delays during the assessment process

DA-STEP 1

Check Council controls and policies

Obtain a section 10.7 certificate

If you have not already done so, you should obtain a section 10.7 Certificate from Council. This certificate contains important information about your land, such as its zoning, and restrictions that may apply to it.

Council controls and policies

All development within the Canterbury-Bankstown local government area is covered by two levels of Council controls that your development will need to comply with:

1. **The Local Environmental Plan (LEP)** is a statutory document that identifies which land uses are permitted within the different zones and some core development standards. Potential applicants will need to obtain a copy of the LEP prior to proceeding with developing a proposal for any land.
2. **The Development Control Plan (DCP)** contains Council's policies on how specific development should proceed. It sets controls for heights of buildings, open space and landscaping requirements, car parking requirements, drainage requirements etc. Council has numerous parts in the DCP which are tailored to suit the type of development proposed. For example, Council has separate parts of the DCP for industrial developments, commercial and residential.

Further understanding your site

3. NSW Planning Portal Spatial Viewer is an enhanced digital mapping tool service which provides information and maps relating to specific addressed and lots in NSW.

2

DA-STEP 2

Prepare plans and supporting documents

Which plans?

You will need to prepare several types of documents.

Please refer to the application checklist, which identifies the required plans and documents required to accompany the relevant application type.

We recommend that you check with us for any requirements that specifically relate to your proposal or the site.

For further clarification on these documents, please refer to the 'Explanation of plans and reports' page.

Please note that Gen AI must not be used in generating content and materials which is reflecting the applicants' proposed works. Gen AI is prohibited under the Land and Environment Court of New South Wales.

Electronic copy and naming convention

When you submit your application on the Portal you will need to upload each of the plans and documents onto the Portal and select the corresponding document type from the list. An additional PDF file must be provided that contains all architectural plans including demolition plan, sediment and erosion control plan, site plan, floor plans, roof plan, elevations, sections, door & window schedule and external colour & finishes schedule. You will need to select the document type of 'other' on the portal. The architectural plans must NOT include the survey, stormwater plans, landscape plans, solar access plan and A4 Neighbour Notification Plan which must each be lodged as their own separately named single pdf document. You will need to ensure that each plan and document you upload is accurately named and uploaded against the correct label as seen on the Portal, for example:

- Owners consent
- Floor Plans
- Sections and Elevations
- Survey plan
- Neighbour Notification Plan
- Solar Access plans
- Landscape plans
- Stormwater plans
- Statement of Environmental Effects
- Costs Summary/Quantity Surveys Report
- Waste Management Plan
- BASIX Certificate
- Contamination Report
- Heritage Impact Statement
- Traffic Impact Assessment
- Arborist Report
- Acoustic Report

Design excellence clause

If your proposal is subject to the Design excellence provisions (clause 6.15) of the CBLEP 2023, you must demonstrate that it achieves design excellence by submitting a Design Excellence Statement (DES).

The Design Excellence Statement should:

- Outline how the design criteria set out in the Clause 6.15 have been addressed, and
- Be supported by one or more of the following:
    - A **Design Review Panel advice** letter supporting the proposed design.
    - **A Design Review Report** explaining how feedback from the DRP and/or previous Pre-DA advice has been incorporated into the design. Where the design departs from previous advice, the report must explain how the changes achieve a better outcome and satisfy the relevant design criteria.

To complete and submit a Design Review Panel request, please follow the steps outlined here.

Explanation of plans report

Please note that all plans, sections and elevations must include orientation, north point (true north), scale (show ratio and bar scale) and date. These documents must also include title block indicating name of architect/designer, date of preparation, plan number, amendment number (where relevant) and client's name and address of subject property.

1. Access Report

An Access Report must be prepared by a suitably qualified and experienced access consultant. It demonstrates whether the development provides easy access and inclusive areas, in compliance with the Disability (Access to Premises – Buildings) Standards 2010 and the Building Code of Australia.

2. Acid Sulfate Soils Report

An Acid Sulfate Soils Report may be required in low lying coastal areas which have acid sulfate soils. To understand if your site requires an Acid Sulfate Soils Report, please refer to clause 6.1 of the CBLEP. A report must be prepared by a qualified geo-technical engineer.

3. Acoustic/ANEF Report

A report, prepared by an acoustic consultant will need to be submitted where noise is a major design issue. It is required for the following applications:

- Development within ANEF contours, directly adjacent to railway corridors, state/regional roads
- Some changes of use with potential for impacting on adjoining properties in relation to noise (e.g. child care centres, schools, places of public worship), or where the hours of operation may have impacts on residential properties
- It should also show that the proposal will not cause or be affected by noise emission i.e. construction noise

4. Arborist Report

An Arborists Report provides comments on the age, health, condition and significance of individual trees over 5 meters in height within the site or adjoining properties. It must be assessed by a qualified arborist - minimum Australian Qualification Framework (AQF) Level 5 Diploma of Horticulture (Arboriculture) and/or equivalent experience. It is generally required for applications where the tree is likely to be removed, covered by a tree protection order, on adjoining land, or considered by council to be prominent due to age, amenity, size or habitat. The Arboricultural Impact Assessment must comply with Australian Standard® AS 4970-2025 Protection of trees on development sites, and s8.5 of the Tree Management Manual, available from Council's website.

5. Architectural Drawings

Architectural Drawings should be submitted in a combined PDF file to the portal. The file must include the following drawings:

Site Plan: A site plan highlights a top view of the proposed existing and building/s or works and other features on the site.

Site Analysis: Analysis of existing site conditions in relation to surrounding land and buildings. It should NOT include details of the proposed development (these are to be shown on the site and floor plans). Include the following details:

- Property boundaries and dimensions, lot and deposited plan numbers
- Easements sewer mains, rights of way, stormwater, channels and drainage
- Access to driveways and roads
- Landform and contours
- Landscape features and existing vegetations.

Plans: These drawings should clearly document the proposed works, including the following:

- Room layout and name, including dimensions, partitioning, location of windows, walls and doors
- Total floor area and floor space ratio
- Disabled persons access (if required)
- Vehicle entrance and exit driveways/carparks
- Waste bin storage and collection facilities

Elevations and Sections: These drawings will clearly document the proposed building/s or works, featuring an elevation viewed from each direction and at least one section. Please include:

- Building facade, windows, roof profile
- External finishes (e.g. wall, roof, window, door)

Streetscape Elevation: A streetscape elevation should show the proposed building in the context of buildings on either side and demonstrate how the design of the proposed building as viewed from the street is not inconsistent with the existing buildings

6. BASIX Certificate

A BASIX (the Building Sustainability Index) Certificate assesses the potential performance of residential development against water consumption and greenhouse gas emission targets prescribed by the NSW Government.

The certificate can be accessed using the web-based planning tool. If you are proposing a new dwelling, alterations or additions to an existing dwelling valued at $50,000 and above or a swimming pool (or spa) with a volume greater than 40,000 litres a BASIX Certificate is required. Council will not accept a BASIX Certificate more than three months old. BASIX certificates require different commitments to be shown on the plans at different stages of the development, either 'On DA Plans' or 'On CC Plans', with some commitments needing a 'Certifier Check'.

7. BCA Report

A BCA is a written compliance statement prepared by a qualified certifier and outlines how the structure complies with the Building Code of Australia and addresses Sections 62 and 64 of the Environmental Planning and Assessment Regulation 2021.

The report should highlight:

- Building classification and rise in stories of the building
- The type of construction
- Confirmation that the development will comply with the Performance Requirements of the Deemed-to-Satisfy provisions of the Building Code of Australia
- If compliance fails for the development, it should outline areas which fail as well as providing alternate solutions

8. Bushfire Report

A report submitted with any application for works on bushfire prone land. Obtaining a planning certificate (10.7 Certificate) provides you with information on this. The report will need to assess the proposed building against the Rural Fire Service Planning for Bushfire Protection Guidelines.

9. Contamination Report

A report assessing the level of contamination on a site in accordance with Councils Contaminated Lands Policy. This report must be compiled by a suitable geotechnical consultant.

10. Cost Summary Report/Quantity Surveyors Report

For development valued at less than $100,000, a value of works estimate can be provided by the applicant, architect, designer or builder but must include the methodology used to calculate the estimate and how it was determined.

For works between $100,000 and $3 million, a quantity surveyors report should be prepared by a registered quantity surveyor.

For works over 3 million an Estimated Cost Development Report is to be submitted using the AIQS practice standard for estimating development costs.

Please refer to the Planning Circular (PS 24-002) for further information on what to include and a guide template.

11. Demolition Plan and Statement

The Demolition Plan will consist of a site plan which identifies the buildings and structures to be demolished, location of security fencing, waste storage areas, temporary toilet facilities, erosion and sediment control fencing, stabilised vehicle access point and tree protection measures. The Demolition Statement will identify the hazardous materials in the building, methods of demolition and waste disposal and the requirements for asbestos clearance certificates.

12. Design Advice Letter (DAL)

A Design Advice Letter (DAL) is the formal written outcome of a Design Review Panel session. It records the Panel's independent design assessment and recommendations on how the proposal responds to relevant planning controls, design excellence criteria, and site-specific considerations. The DAL is advisory in nature and does not constitute formal approval or refusal of the proposal.

13. Design Excellence Statement (DES)

A Design Excellence Statement (DES) is a mandatory written statement prepared by a suitably qualified designer for development proposals subject to the Design Excellence provisions under Clause 6.15 of the Canterbury-Bankstown Local Environmental Plan 2023.

The DES must demonstrate how the proposal responds to and achieves the Design Excellence objectives and criteria contained within Clause 6.15, including a high standard of architectural, urban and landscape design.

The statement should outline the overall design strategy, design rationale, and design development process.

14. Design Review Report (DRR)

A Design Review Report (DRR) is required for development proposals that have previously been considered by the Design Review Panel. The report must be submitted with the development application and/or any subsequent referral to the Design Review Panel. It must outline how the proposal has responded to the Panel's advice, identify design changes made since the previous review, and provide justification where recommendations have not been adopted.

15. Design Verification Statement (DVS)

A Design Verification Statement is a statement by a qualified designer for a residential apartment development which verifies how the design quality principles in housing SEPP are achieved and demonstrates how the objectives in parts 3 and 4 of the Apartment Design Guide have been achieved.

16. Environmental Impact Statement

A Environmental Impact Statement is a document containing information regarding the site in accordance within Part 8 Division 5 of the Environmental Planning and Assessment Regulation 2021.

17. Erosion and Sediment Control Plan

A plan providing information on how the site will mitigate stormwater pollution, erosion and sedimentation at various stages of the construction progress. Please show the following details:

- 'Site' or 'disturbed area'
- Location of stockpiles and secure chemical storage area
- Location of temporary and permanent
- Soil and water management controls
- Vehicle access point/s
- Location of drains, downpipes, pits and watercourses;
- Proposed integration with on-site detention/infiltration
- Stormwater discharge point (if proposed)
- Details on staging of works
- Location of any vegetation to be removed and proposed re-vegetation program

18. Exception to Development Standards

Applications which non-compliancy must provide a written statement addressing the following points:

- Identify the development standard
- Identify how you are amending the project and why the compliance standards are unreasonable
- Demonstrate justifications to alterations and ensure consistency with objectives of the environmental planning and assessment act 1979.

Please refer to Clause 4.6 of the Canterbury Bankstown Local Environmental Plan 2023 for information regarding exceptions.

19. Fire Safety Report

A Fire Safety Report aims to address measures to prevent, detect or supress fire or prevent the spread of fire according to the National Construction Code (NCC). These measures should relate to any BAL (Bushfire Attack Level) risk assessment certificate which has been issued in relation to the development.

Alternative Solutions will need to be indicated identifying the areas that do not comply with the 'Deemed-to-Satisfy" provisions of the NCC

20. Geotechnical Report

A Geotechnical Report must be prepared by a qualified geotechnical engineer. The document should outline the following conditions:

- The ground conditions (soil types, depth to rock and groundwater levels)
- Structural adequacy and stability of the site, as well as the impact of the proposed works on this
- Any management and mitigation of adverse impacts to surrounding properties
- The permeability of the soil (if infiltration is proposed).

This document is required for all basements as specified within section 15 of Chapter 5.1 (former Bankstown) and within end sections of Chapter 5.2 (former Canterbury) of the Canterbury Bankstown Development Control Plan DCP.

21. GFA/FSR Calculation Plan

This calculation should be featured on floor plans which show room names and each given area. The GFA is the sum of the area of each floor of a building, from the internal face of the external walls.

22. Heritage Impact Statement

A document outlining the impacts of the proposed development on the heritage item. The Heritage Impact Statement should be prepared by a professional heritage consultant. For sites of State significance (listed on the State Heritage Register), or of exceptional significance to the local area, a Conservation Management Plan (CMP) may also be required. Refer to the Heritage Resources and Controls on councils website for more information as well as all heritage items listed in Canterbury Bankstown. For further information please refer to the following documents:

- Part 5.10 Heritage Conservation in the Canterbury-Bankstown Local Environmental Plan
- Schedule 5, Part 1 Heritage Items Canterbury- Bankstown Local Environmental Plan 2023 - NSW Legislation
- Assessing Heritage Significance publication

23. Landscape Plan

A landscape Plan should show details of the proposed landscape design, prepared by a qualified landscape architect. It should demonstrate an understanding on the site and context. Please include the following details:

- Location, species of all existing trees and plants, retained or removed and information on tree height and canopy spread
- Arboricultural advice detailing the protection or removal of trees, if required
- Proposed tree and shrub planting, including number of each species, their location, massing and mature height, and any proposed edging and mulching
- Proposed surface treatments e.g. turf

24. Neighbour Notification Plan

Neighbour Notification Plans are reduced copies of the site plan and elevations of a proposed development. The reduced elevations should be exact copies of the elevations submitted with the DA, and the reduced site plan must not show any of the internal layout of the proposed development. All this information must be provided on one A4 sheet.

25. Owners Consent

A form providing consent for the development on the given land by the owner/s. All owners must be listed and match councils' records and if the owner is a company, the application must state their name and position within the company. This should be accompanied by the companies ASCIS and ABN numbers.

26. Photomontage/3D Perspective

A photomontage provides a representation (typically 3D) of the proposed development within the existing surrounding context. The montage must include a minimum of two sides of the site.

27. 3D Model

For larger developments a 3D Model is required to be submitted as part of the Pre-DA, DA or SSDA's documentation. The submitted 3D Models will be inserted into Council's LGA wide 3D Digital Model, to keep it up to date. They will also be used for detailed development assessment and to inform the community about new development applications. For more information, including applicable building typologies and technical specifications, please consult the 3D Digital Model Submission Manual.

28. Plan of Management

A Plan of Management demonstrates how a proposal will be managed to minimise amenity and environmental impacts. Proposals such as commercial, industrial and residential uses (including boarding houses, groups homes and hotels) may require this report. Please include the following:

- Type of business
- Number of staff and expected customers/clients
- Hours of operation
- Number of patrons and building safety (for entertainment venues)
- Plant, machinery and production processes
- Noise controls
- Type and quantity of goods handled
- Arrangements for transport, loading and unloading
- Hazardous materials and processes
- Complaint management

Additional information may be required for this document, dependant on the nature of the development.

29. Schedules of Colours and Finishes

If your application involves a new building or additions to an existing building, a schedule of colours and finishes is required. Provide a digital render of samples or colours, materials and textures and identify the location on the facade. It should include the manufacturer product and name provided in colour.

30. Shadow Diagram/Daylight Access

This plan must show the effect, in plan and elevation, of any existing shadows and any additional shadows cast by your proposal. This is particularly in respect of its overshadowing effect on any windows, private yard spaces, clothes drying areas, and any solar hot water or similar systems on any adjoining property. Please show the following details:

- North point (true north)
- Scale (show ratio and bar scale)
- Date, plan number, amendment number
- Position of existing and proposed buildings oposition of existing and proposed buildings on the site
- Windows with associated room use, private open space and any solar panels on adjoining land
- Shadows cast at the mid-winter solstice and at the equinoxes at 8am, noon and 4pm. Additional times and dates, e.g. hourly at mid-winter, may also be required
- If the proposal is replacing an existingbuilding, show change in shadows fromexisting to proposed development
- View of the sun/sun eye diagrams are required for residential flat buildings, mixed use developments and boarding houses to establish solar access into the proposed development and the shadow cast onto neighbouring properties

31. Social Impact Statement

A written report required to accompany proposals where there are likely social impacts as a consequence of the development.

32. Statement of Environmental Effects

Statement of Environmental Effects details the likely impacts of the proposal, and the proposed measures thatwill mitigate these impacts. It is a written statement aboutthe proposal that supports your plans and drawings. The statement should include details that expand on the information shown on plans and other drawings. The statement tells us what you are doing and how it will be done.

The statement should also detail how the development meets with all policies and planning controls that apply to the land, for example the relevant SEPP, CBLEP, CBDCP controls which may be prevalent. Simply stating that the proposal is complaint with our codes is not satisfactory.This statement must demonstrate how compliance is achieved.

For applications that do not propose any work, such as change of use applications, a Statement of Environmental Effects is still required. The statement must outline how the use is permissible and complies with the planning polices but also how the use will operate if consent is granted e.g. number of staff, hours of operation, vehicular access and loading and waste management. Please note all applications should an include a history for previous DAs related to the site, if applicable.

33. Stormwater Drainage Plan

This plan will illustrate how stormwater runoff from your site will be managed. You must consider any information provided with a relevant Stormwater System Report if the site is affected by stormwater flooding or any other Council, Sydney Water or private drainage assets. It is essential to incorporate your drainage design in the initial architectural design process as problems with discharging stormwater runoff from your site may require a redesign of your proposal. Sites that fall away from the street frontage may have difficulty discharging stormwater runoff to the street, requiring a drainage easement to be negotiated through a neighbouring property to discharge the stormwater. Council prohibits the use of pump-out systems other than for underground basement carparks where the only area being pumped is the driveway and associated sub-soil drainage system.

Your drainage design must be prepared by a registered Civil Engineer and include provision for on-site detention (OSD) where necessary. Information to be included in your proposal includes, but is not limited to, the required information listed. The individual circumstances of your site and development may warrant further information to be provided for consideration as part of your application. NOTE: Stormwater plans that are thorough and concise, with the appropriate information presented, are less likely to incur delays during assessment.

34. Stormwater Systems Report/ Flooding

A report which highlights potential flooding on the proposed building any building on the potential estimated floodway within the LGA. Council has mapped all of the estimated potential floodway's in the former Bankstown LGA catchment and there will be a notation on a Sec 10.7 Certificate if the subject property falls within an estimated flood affected lot.

Prior to preparing your plans, you should apply for a Stormwater Information Application (SIA) and purchase, from Council, a Stormwater System Report (SSR) via the SIA. In some instances, the SSR will recommend you provide a flood impact study for any proposed buildings to be constructed on the site

35. Survey Plan (<6 Months)

A survey plan must be prepared by a registered surveyor who is registered with the NSW Board of Surveying and Spatial Information (BOSSI) and must include their name, registration number and signature. The plan must not be more than six months old at the time of lodgement.

The plan must demonstrate the existing condition of the site and adjoining properties. This includes the site boundaries, levels and contours (in AHD) and the position and the reduced levels (to the AHD) of all existing structures and landscaping. This should include trees and solar panels on adjoining land (including the street and adjoining parks or open space), especially window locations in adjoining buildings with top and bottom of sill heights.

36. Traffic Assessment and/or Parking Reports

A Traffic Plan report needs to be made by a suitable qualified traffic consultant, demonstrating whether the proposed operation will have an impact on the movement of vehicles and traffic in the surrounding road system and may include measures to mitigate the impact of vehicle movement from the proposal, in order to ensure the surrounding road network is not compromised.

A Parking Study analyses how much parking is required, how it is used and whether the parking provided is adequate for the given context and site. It should justify how the development wont adversely impact surrounding streets.

For further information on Parking Controls Please refer to Chapter 3.2 of the CBDCP.

37. Waste Management Plan

A waste management Plan is a report highlighting how management and minimisation of waste is to be carried out during the demolition construction and operation of the premises/development. This plan will need to:

- Specify waste by type and volume and nominate reuse and recycling potential
- Nominate siting of waste storage and recycling facilities for demolition, construction and final use
- Specify how and where residual wastes will be disposed of
- Show how ongoing waste management of the site will operate

Please refer to the Waste Management Guide form for further guidance.

3

DA-STEP 3

Complete and submit your application

Make your application

Applications can only be submitted to Councils via the NSW Planning Portal.

This means you must log onto the Portal to generate and submit your application.

For an application submitted via the Portal you will not need to complete a Council application form (the Portal will ask you a series of questions that it will create as an "Pre-Lodgement application form") but you do need to upload to the Portal the plans and supporting documents that are listed in the checklist in this Guide.

After you have submitted your application, Council will review it and either accept it or contact you if something is missing. Multiple return requests can occur where issues remain unresolved. Once Council is satisfied with the information you've submitted you will be sent an invoice to pay the application fees. Payment must be made after 7 days.

After the fees are paid Council can proceed with processing your application. If Council requires additional information, you will be contacted via the Portal and you will provide your response via the Portal. Likewise, once Council determines your application you will be informed via the Portal.

Gifts and donations

Have you, or anyone with a financial interest in this application made one or more political donations or gifts to a Councillor or political party, with a total value of or exceeding $1000 within the past two years?

Persons having a financial interest include you as the applicant or any person on whose behalf you make this application, the property owner or owners, any person who has entered an agreement to acquire the site or any part of it, any members of the family of the persons previously mentioned; developers, architects, designers, engineers, landscape architects, traffic consultants, planning consultants, heritage consultants; builders or any person likely to obtain a financial gain if the proposed development is authorised or carried out.

If one or more donations or gifts with a total value of or exceeding $1000 is made to a Councillor or political party by you or anyone with a financial interest in this application after the application has been made and prior to the determination of the application, those donations or gifts must also be disclosed by completing the Disclosure Statement. If a gift is made to a Council officer after the date of lodgement of the application and prior to determination of the application, that gift must also be disclosed by completing the Disclosure Statement. This requirement is in accordance with section 10.2 of the NSW Environmental Planning and Assessment Act 1979.

Copyright Declaration

Most applications lodged with us are required to be notified to allow members of the community to make comment on it. To do this we display (for viewing only) your application at our Customer Service Centres and the local library or our website. In addition we provide an A4-sized copy of the proposed plans (site and elevation plans – external configuration only) to nearby properties. These plans are posted to neighbours for their information and are published on our website. The plans are also used for requests made under the Government Information (Public Access) Act 2009. While the author of the plans (being the person who drew the plans) is not required to make this declaration, which allows us to copy and publish the A4 plans, the absence of this may impede Councils assessment of the application and may lead to an increased number of objections to your application and may cause delays in the processing of it. We strongly advise the plan author to provide the Copyright Declaration and allow us to publish A4 reduced plans of your application. The Copyright declaration CANNOT be provided by the property owner but only by the designer/architect.
