14. ADVERTISING

14.1 OBJECTIVES FOR ADVERTISEMENTS LEP 2000 Cl 82

LEP 2000 recognises that physical advertising through erection of signs on land and buildings affects the character of the City's public places.

Controls for advertising seek to ensure that, where advertising is directed towards or across public places (including roads and public areas such as parks) to attract the attention of the public, then the advertising should complement the character of that area.

Advertisements should be designed to relate to the land or building. While advertisers may wish signs to stand out, in order that signs complement the character of Orange they should fit within the built and landscape environment.

It is recognised that business should be able to present their activity to the public in an appropriate manner. Business Identification Signs serve this function.

In addition to Orange LEP 2000, State Environmental Planning Policy 64 has been introduced to control advertising throughout the State.

14.2 CONSENT FOR ADVERTISEMENTS LEP 2000 Cl 82

A number of signs are listed in Schedule 3 of LEP 2000 as being exempt development and do not require consent. These signs are considered to have minor impact due to their location, size and number.

Signs should complement the scale of associated buildings. For signs attached to buildings, the signs should not extend beyond the outline of a building when viewed at the front elevation.

Pylon or free-standing signs in business areas should have a height consistent with the height of the main building on the site. In residential areas, free-standing signs should be located in a landscaped garden setting and should be at a personal scale (ie, generally less than 2 metres in height).

Proliferation of signs should be avoided since they detract from the character of the area and provide confusion for the travelling public.

Council will consider how the location, size, colour and design of an advertisement relates to the particular setting.

PO 14.2-1 PLANNING OUTCOMES – ADVERTISEMENTS

1 The location, size, colour and design of advertisement complement the character of the locality.
2 Advertisements on buildings fit within the envelope of the building.
3 Free-standing pole or pylon signs relate to the height of associated buildings in business and industrial areas.
4 Free-standing signs in residential areas are at a personal scale (ie, about 2-metres high or less) within a landscaped setting.

14.3 ADVERTISEMENTS FOR HIGH-PROFILE AREAS

LEP 2000 Cl 82

General advertising is prohibited along highways and main arterial routes into and around the City in rural and residential areas and parkland to ensure that the valued rural landscape and built character of the area are not adversely affected by signs.

Business Identification Signs identifying the business activity on the same land are permitted, provided that they relate to the scale of operations and complement the rural or residential setting.

Billboards conforming with the Public-information Sign criteria erected for or by Orange City Council can occur as exempt development. To be consistent with the intent of public information, such signs will provide community or public messages.

Where community or public information is sponsored by a commercial undertaking, Council may agree to such information including sponsor's logo and name on a Public-information Sign where the area required for sponsor information is less than 10% of each sign face.

PO 14.3-1 PLANNING OUTCOMES – HIGH-PROFILE AREAS

1 Business-identification Signs complement the character of the locality.
2 Public-information Signs incorporate a small proportion of associated commercial advertising (ie, 10%) for event sponsors.
